2. The drawings filed on 9/15/2001 are objected to by the examiner. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required.

and converting the y bit token back to the x+ bit pointer if the x bit token is valid, and preventing the memory associated with the x+ bit pointer from being accessed if the x bit token is not valid.

5. The prior art of record teaches:

- Barlow et al. (U.S. 4,799,222) teaches a method for verifying that address information is being transferred without error by generating integrity bits the address.
- Kemp et al. (U.S. 5,391,302) teaches a method and system for detecting and verifying error of the address for the execution of read/write operation by generating parity information associated with the transferred address.
- Kidd et al. (U.S. 6,182,267 B1) teaches a method for detecting errors in data transmission by generating a checksum value for the data being transferred.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
